ABOUT ME

Motivated DevOps and Cloud Engineer with a strong Software Engineering foundation. Specializing in architecting highly available, containerized Microservices and automating scalable infrastructure on Azure Kubernetes Service (AKS). Proven expertise in modern GitOps methodologies, utilizing GitHub Actions and ArgoCD to orchestrate secure, zero-downtime continuous delivery pipelines. Passionate about eliminating deployment bottlenecks, optimizing system observability, and engineering fault-tolerant cloud environments that accelerate software delivery.

EDUCATION

- **Sri Lanka Institute Of Information Technology** **Nov 2022 - 2026 May**

  B Sc (Hons) In Information Technology

- **St Mary's College Hambantota** **2018- 2020**

  G.C.E. AdvancedL evel (Engineering Technology with ICT)

Experience

Intern Software Devops Engineer | Arimac Digital **Sep 2025 - Mar 2026**

- Managed and maintained cloud-based Virtual Machines (VMs), ensuring high availability, system reliability, and optimal resource utilization across environments.
- Contributed to the design, troubleshooting, and optimization of CI/CD pipelines, improving deployment success rates and reducing downtime in both active and legacy systems.
- Configured and maintained automated build and deployment pipelines, enabling consistent and efficient software delivery across development and production environments.
- Implemented and monitored system observability using Grafana dashboards, tracking key metrics such as uptime, latency, and resource usage to proactively identify and resolve issues.
- Applied Site Reliability Engineering (SRE) principles to improve system stability, including monitoring SLIs (Service Level Indicators) such as availability and response time.

PROJECTS

- **Library OS - Microservices Platform** 2026

  A scalable, 8-node cloud library system built with NestJS, React, and MongoDB. Containerized efficiently using Docker, orchestrated natively on Azure Kubernetes Service (AKS), and deployed continuously via an automated, zero-downtime GitOps pipeline using GitHub Actions and ArgoCD.

  Technologies used: NestJS, React, Docker, Kubernetes, Azure, ArgoCD, GitHub Actions., API Gateway ,Rabit MQ ,Mongo DB

- **eCommerce Microservices** 2025

  Developed ascalable eCommerce application using .NET microservices architecture with event-driven communication via RabbitMQ. Implemented multiple databases (PostgreSQL, MySQL, MongoDB) using Entity Framework Core and Dapper, and improved performance with Redis caching. Containerized services using Docker, orchestrated with Kubernetes, and managed routing through Ocelot API Gateway. CI/CD pipelines were implemented using Azure DevOps.

  Technologies used: ASP .NET Core, RabbitMQ, Docker, Kubernetes, Azure DevOps, Ocelot API Gateway, Dapper, Entity Framework Core, Polly, Redis, PostgreSQL, MySQL, MongoDB

- **Prana Yoga Management System** 2024

  Ayogastudio management platform built with the MERN stack, supporting MongoDB, MySQL, and PostgreSQL. Integrated with Dapper ORM and Ocelot API Gateway for efficient communication, containerized using Docker, orchestrated with Kubernetes, and deployed via Azure DevOps for scalable and reliable performance.

  Technologies used: .NET, Docker, Kubernetes, Azure DevOps, Ocelot API Gateway, Dapper ,PostgreSQL, MySQL, MongoDB

- **EduHub Online Skill sharing Platform** 2025

  EduHub is a full-stack skill-sharing platform with a Spring Boot backend and React.js frontend. It uses Firebase for authentication and storage, Docker for containerization, and GitHub Actions for CI/CD. The app is cloud-ready and scalable.

  Technologies used: Spring Boot, React.js, Firebase, Docker, and GitHub Actions MongoDB

- **PetHub Petcare management App** 2025

  Pet Pal is a mobile app built with Flutter and Dart that helps pet owners manage pet profiles, health records, and appointment reminders. It uses Firebase for authentication, cloud storage, and real-time updates, delivering a secure and seamless experience across Android and iOS devices.

  Technologies used: Flutter, Dart, Firebase Authentication, Firebase Cloud Firestore, and Firebase Storage

SKILLS

- **DevOps & Cloud Technologies:**

  Docker, Kubernetes, Jenkins, GitHub Actions, Azure DevOps, AWS ,Argo CD, Microsoft Azure, GCP, Terraform (basic), Git, GitHub, Linux, CI/CD pipelines, containerization, cloud-native deployment,Grafana.

- **Automation & Scripting:**

  Python, Bash/Shell scripting, YAML, automation scripting, configuration management, infrastructure automation

- **System & Platform Engineering:**

  Linux server administration, application deployment, system monitoring, troubleshooting, performance optimization, Prometheus, Grafana, log analysis, cloud-based system deployment.

- **Backend & API Development:**

  ASP.NET Core, Spring Boot, Node.js, Django, RESTful API design, microservices architecture, event-driven systems (RabbitMQ), API gateways, service-to-service communication.

- **Databases & Caching:**

  PostgreSQL, MySQL, MongoDB, Redis, Firebase.

- **Software Engineering & DevOps Concepts:**

  DevOps practices, Agile/Scrum, SDLC, infrastructure as code (IaC), CI/CD, microservices, distributed systems, cloud computing, automation, documentation, SRE fundamentals.

- **Soft Skills:**

  Problem-solving, teamwork, communication, adaptability, continuous learning, critical thinking, time management.
